Three late-submitted photos from May to start off this issue.

Q4015 and the only ACB in regular use, ACB4402, were both placed into storage during May. ACB4403 was retrieved from storage and transferred to Hunter Valley coal via SCT. ACC6031 has been reactivated at the end of June, its first use since entering storage just over a year ago.

Regular Acacia Ridge shunter 8112 was brought over to Kalgoorlie in mid June; after only being used once in several weeks to shunt some hoppers from West Kalgoorlie to an ore train at Binduli, it was returned east on 9<sup>th</sup> July.

To meet Mineral Resources' increased iron ore export tonnages, PN introduced a fourth ore consist on the Koolyanobbing – Esperance run. Consisting of two NRs on some CFCLA CHEY hoppers, the initial runs hauled 11 CHEY pairs but were progressively built up each week or so as more CHEYs were transferred from Perth workshops modification / reactivation. Currently it runs with 31-32 pairs. The four ore rakes, the fuel train and a shunt unit plus a spare unit tie up nine or ten NRs at any one time. Occasionally there can be a spare unit or two at West Kalgoorlie as well, awaiting changeover with one or two Esperance units: a significant slice of the NR fleet.
