Mineral Resources' Koolyanobbing – Esperance ore trains now almost all run as 150-160 wagon 2+2 loco DPU, with more WOE's being returned to service from storage at Avon or West Merredin most weeks. There remains one return service, as xMR2 (empty) / xMR1 (loaded) each week which PN operates (though Aurizon ran it one week in late June) with two or three locos and anything from 50 to 120 wagons.

In a surprise move, orange Q4005 returned to service in early July; this unit had originally been put at the end of the queue due to a blown engine but possibly received the power plant from another Q. Q4004's overhaul should be completed any day now; Q4012's is well underway; Q4017's has apparently commenced, while Q4015 and Q4018 remain on stands outside the workshop. Repairs on ACC6030 have not yet commenced, four months after it suffered an engine fire.

S3302 leads 7238, empty caustic tanks, at Mundijong on 2<sup>nd</sup> May.
